

## SMART SOLUTIONS

In the golden age of technology, smart homes are no longer a luxury but part of our everyday comfort and security.

With many years of experience, we help our clients plan and implement livable, reliable, complex systems, whether it be an apartment, a family house or a condominium with hundreds of apartments.

### TOP FUNCTIONS OF SMART HOMES:

#### Heating, ventilation and air conditioning

Based on your habits and heating curves, the temperature will always be just perfect in your home.

#### Shading

Darken and protect your windows with smart shutters and automated blinds, even without the push of a button.

#### Lighting

Imagine coming home every day to a pleasantly illuminated house or apartment. All these without a bunch of remotes or switches.

#### Entry

Lost or forgotten keys are stories of the past with face recognition intercom, fingerprint reader, NFC and bluetooth technologies.

#### Security

In case of an unforeseen event (water flow, burglary, fire, extreme weather), a well-thought-out system not only sends an alert, but can also offer a solution to an emergency.

#### International connections

Being a member of two prestigious international networks of audiovisual and event service companies (AV Alliance and Congress Rental Network), we have extensive global connections and references in 50 countries on 5 continents.
